T mobile family mode filter

The service comes with an app and a physical device to track online activity. Business Wire/T-Mobile It's hard enough for a parent to track what their kids are doing on their cellphones in the home, but it gets even harder when they go or use another device. T-Mobile announced its FamilyMode service Monday. FamilyMode works in two ways: It gives parents control over what their children do online with mobile data in or out of the home, and allows them to control Wi-Fi-connected children's devices like phones, tablets, laptops, game consoles, and smart TVs. The service costs \$20 in advance and then \$10 per month. These include a home Wi-Fi device that tracks all kinds of internet-connected devices located between your regular router and device and the FamilyMode app that lets you control internet usage. PCMag reports that FamilyMode is rebranding from Circle with Disney, a feature you can also find on some Netgear Orbi and Nighthawk routers - but Circle only works on your home network. Some things you can do with the FamilyMode app, according to T-Mobile: Set daily internet restrictions on specific apps or platforms for what apps, platforms, and websites your kids can access on their phones or tablets; Pause and continue access to the mobile Internet; Advertisements with bonus time; See what sites and apps your kids use; Track location of your children; FamilyMode will be available from 29 June. Other carriers (such as Verizon) offer similar parental control services. T-Mobile has created a chart to show how its service compares to others (see below) what might be at hand, although the company is naturally a little biased. What family control plan is right for you? Business Wire/T-Mobile Verizon Smart Family app: A new way for parents to track their children and limit phone usage. How to set up parental controls on your child's iPhone. Protect your child and credit card. T-Mobile's FamilyMode lets you manage, track, filter and set time limits for phones, tablets, game consoles, laptops, smart TVs, and other Wi-Fi connected devices in your home... and it's only \$20 out of pocket for the device and \$10/mo for the T-Mobile FamilyMode service. What is FamilyMode? For up to 17 (12 Voice, 5 Mi) different lines and for one monthly subscription you can: Set daily internet limits on apps or platforms Choose which platforms, websites and apps they allow on phones and tablets Pause immediately and continue mobile internet access Filter inappropriate content Reward your children with a bonus time in front of the screen See where your children spend time online Know where your kids Optional FamilyMode Home Base can be purchased for \$20, which allows parents to manage devices connected to home (ex: laptops, game consoles). Use the FamilyMode app to track and manage T-Mobile FamilyMode. FamilyMode eligibility and compatibility is not eligible for one-month plans. It requires an active, non-past due account. Account, T-Mobile users on the qualified Magenta, T-Mobile ONE, T-Mobile Essentials or Simple Choice plan and for business users with 17 lines or less (12 Voice 5 Mobile Internet). The primary account holder's device must have a working camera to scan the SPARQ code. FamilyMode filters are used instead of Web Guard. Primary account holders who have FamilyMode won't have the option to add or manage a web sym on my T-Mobile or T-Mobile app. The device must be within a continental U.S. service not designed to provide results when roaming outside this area. It's not compatible with smartwatches. Get the T-Mobile FamilyMode app Sign up for T-Mobile FamilyMode at T-Mobile retail stores, online, or by calling 1-800-T-MOBILE. Then simply download the T-Mobile FamilyMode app from the app store on a compatible device. See the FamilyMode app for details of a compatible software version. Add T-Mobile FamilyMode Home Base Adding devices Home base is easy - pick up one in any T-Mobile store or call 1-800-T-MOBILE (existing customers can dial 611 from their T-Mobile phone). Home Base is yours at a promotional rate of just \$20 - a saving of \$80 from the suggested retail price for a limited time! For more information about T-Mobile FamilyMode, visit . FamilyMode & DIGITS are incompatible; pausing the Internet while using DIGITS could prevent calls, including calls to 911. Qualif T-Mobile plan, application installed on all devices, & iOS / Android device req'd. Filters may not block all content that you consider objectionable and may not filter some secured (HTTPS) traffic. Home base: Compatible Wi-Fi router req'd. Coverage may not be available in some areas. Location information is approximate and may not always be available. The monitored device must be adjusted and provide location services. Use FamilyMode as intended; The terms of the application apply. Please refer to the Privacy Policy and the terms and conditions (including the arbitration T-Mobile.com for additional information. FamilyMode is a trademark of T-Mobile USA, Inc. Home Base and compatible Req'd Wi-Fi router for some home devices. See all conditions Set time limits for your family, pause internet access, or give screen time as a reward. Qualif T-Mobile plan, application installed on all devices, & iOS / Android device req'd. See all real-time location data conditions that help you keep track of your family members. The monitored device must be adjusted and provide location services. See full terms Use preset or custom filters to ensure your family only sees age-appropriate content online. Filters may not block all content you consider and will not filter secured (HTTPS) traffic. See all the conditions Understand where your family spends time online, so you can help develop good digital habits. With the addition of Home Base, you can set restrictions on TVs, computers, game consoles, and more. Compatible Wi-Fi router req'd. See the full schedule of conditions when family members can use certain apps and leave Increase daily limits, extend bedtime, or disable downtime. Set the time to disconnect your device from the Internet at night. Set time without the internet, so your family can finish chores, do homework, or just go outside. T-Mobile wants to limit your data, but not the old-fashioned way. Today, the company announced Family Mode, a combination of hardware/software that can lock both your family's devices and your home network to cut off the Internet when you think kids shouldn't use it. I say kids, but I really mean any of us. I know I'm an internet addict and I can't stop watching Twitter until I leave my phone on the table and go to bed. Family Mode combines wireless usage controls and a new version of an existing home network device, Circle, to extend restrictions to any device on the home network. The basic service costs \$10 per month and controls children's iPhones, iPads, and Android devices (but not Amazon Fire devices), allowing parents to track usage, check location, and filter content, regardless of which network they're connected to. It's an upgrade to T-Mobile Family Allowances, an online-based feature that lets you block and manage calls and messages on your children's phones, but has no effect on data and app usage. Rebranded Circle hardware costs \$20 upfront on top of the basic monthly fee, and received a FamilyMode Home Base badge. Its role is to monitor, filter and, if necessary, cut off access to anything connected to your home router, device by device. You can set different time limits and content limits for your smart TV, Xbox, and tablet, for example. Because it is based entirely on a router, there is no application to install on the client's devices. In our full circle review, we explain that it uses a strategy called address resolution protocol (ARP) to intercept data before it reaches the Internet and that it has a fairly flexible set of levels and filters for content. Its main drawback is that it filters the internet device by device - if children and adults share devices, you can not filter the children's account, but not the account of an adult. Circle software is also available on Netgear's Orbi and Nighthawk routers. Now, before you complain that this solution can be worked on, of course it can. Just as child tracking devices are for children who want to be followed, Family Mode is for families who basically want to obey the rules but need a nudge. There is nothing to stop someone from smuggling into the hotspot and avoiding the Circle; it's not the Faraday Cage family. Similarly, if an app works like Circle's Go, it can be disabled on your phone. (Then you will have to notice it and impose consequences.) Family mode doesn't necessarily give you anything that isn't already out there; we have an overview parent control, and the Circle already exists. Prices are different here. A standalone Circle costs \$99, plus \$4.99/month for a Circle Go subscription (up from \$9.99/month in our review.) On Netgear Routers, Circle Circle Plus Circle Go costs \$9.98/month. However, Circle doesn't control phone calls and messages — internet data only. The advantage seems to be to combine filtering and call/text reporting and the internet and putting everything into one account. Family Mode and Home Base will be available through T-Mobile on June 29th. Further reading iPhone app reviews iPhone App best pick picks
